

LUCA PANAYIOTOU

AI Evaluation | Applied AI | Technical Operations

United Kingdom | lucapanay13@gmail.com | [linkedin.com/in/luca-panayiotou-64936b256](https://www.linkedin.com/in/luca-panayiotou-64936b256) | github.com/Luca-1304

PROFILE

Evidence-led AI evaluator and practical problem solver with experience across insurance operations, fire-safety compliance and customer-facing work. I focus on turning unclear capability claims into testable workflows, observable evidence and bounded decisions, while keeping human ownership, limitations and consequences explicit. Strong communicator with an IT foundation and a track record of learning quickly across technical and operational environments.

SELECTED TECHNICAL WORK

Agent Completion Verifier / Agent Reliability Arena | Independent public project | 2026

- Designed an evidence-led evaluation approach that separates an AI agent's completion claim from independently observable state and a fixed acceptance contract.
- Built and documented a controlled deterministic fixture in which independently verified outcomes moved from 2/8 to 6/8, while three unsupported completion claims were reduced to zero.
- Made architecture, trace evidence, limitations, human ownership and next-test requirements explicit rather than treating a system's own success message as proof.
- Used Python, JavaScript, HTML/CSS and Git/GitHub to create public, inspectable artefacts and employer-facing documentation.

CORE CAPABILITIES

AI evaluation & quality

Acceptance criteria, failure modes, evidence fields and trace review.

Technical delivery

Python, JavaScript, HTML/CSS, Git/GitHub and structured documentation.

Applied AI & automation

Workflow design, human approval, recovery boundaries and prototyping.

Operations & communication

Stakeholder support, policy/admin accuracy, client relationships and compliance awareness.

PROFESSIONAL EXPERIENCE

Insurance Operations & Relationship Support | Stanborough Underwriting | 2023-Present

- Supported policy-related administration, professional correspondence and varied operational tasks in a structured insurance environment.
- Developed professional networking and relationship-management skills across clients, brokers and wider business contacts.
- Handled changing priorities with discretion, accuracy and a practical problem-solving approach.

Fire Safety Technician | MJ Fire (now FAFS) | 2022

- Conducted water-pressure testing on dry risers to support fire-safety compliance.
- Identified and reported potential faults, following procedures where accuracy and public safety mattered.
- Built practical awareness of regulated systems, documentation and consequence-sensitive work.

ADDITIONAL EXPERIENCE

Labourer | Various residential construction projects | 2021

- Assisted with building, repair and renovation work in residential properties.
- Worked physically and collaboratively while adapting to changing site requirements.

Ticketing Assistant | Welling United Football Club | 2020-2021

- Managed ticket distribution and customer enquiries on match days.
- Delivered friendly service in a fast-paced public environment.

EDUCATION

BTEC Diploma in Information Technology - Merit | North Kent College | Completed 2022

- Developed a practical foundation in IT, digital systems and structured technical work.

GCSEs | Stationers' Crown Woods Academy | Completed 2020

- Subjects included English Language and Literature, Mathematics, Spanish, Religious Studies, Geography, Drama, Public Services and Hospitality & Catering.

PROFESSIONAL DEVELOPMENT & CERTIFICATIONS

- OpenAI Academy: Agents and Workflows; AI Foundations; Applied AI Foundations (2026).
- OpenLearn / The Open University: Business Models in Strategic Management; Financial Statement Analysis and Interpretation; Fundamentals of Cost Accounting and Environmental Management Accounting; Risk Management; Working in Teams (2025).
- Focus Awards Level 3 Diploma Practitioner in Personal Training (RQF), PT Academy (2026).

WORKING STYLE

- Evidence before claims: separate what was observed from what is inferred or still uncertain.
- Human-directed delivery: keep authority, approval and accountability visible.
- Clear communication: explain technical ideas in practical language and adapt to different audiences.
- Continuous learning: move quickly across unfamiliar domains without pretending expertise that has not been earned.

INTERESTS

AI reliability, adaptive systems, mathematical modelling, physics and materials, human-AI systems, visual communication, football and strength training.
